

WHAT IS IT?

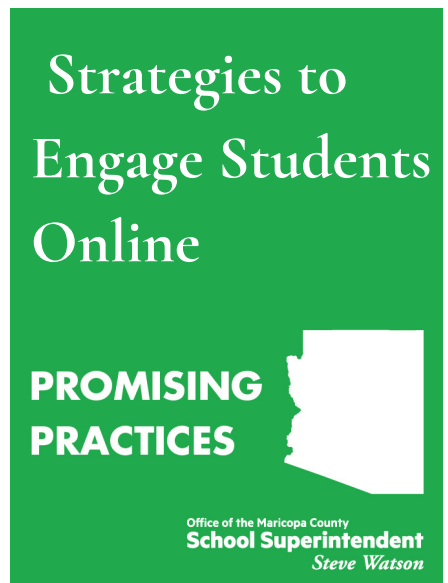

Pearson Online & Blended Learning K-12 has created an 18-minute interactive video module to support teachers with student engagement in virtual learning.

“In this module teachers explore a variety of strategies to motivate and engage students in their learning. Activities include tips for fostering academic ownership, providing relevant and meaningful feedback, and other student engagement strategies.”

Along with the interactive video module, Pearson offers a list of Strategies to Engage Students which includes 45 engagement strategies.

IMPACT?

The key to student success is engagement. These specific and targeted strategies focus on building community and student engagement through effective teaching practices which can be applied immediately in synchronous and asynchronous virtual learning settings. They are geared to promote academic ownership which leads to authentic engagement of students and thus, higher level thinking which results in deeper learning.
