

WHAT IS IT?

Breakout rooms is a feature on Zoom that allows the host to break up a large group into smaller groups. It gives the host an option to create small groups manually (choosing who goes in each room) or automatically (random students in each room). Breakout rooms are very easy and fast to create.

IMPACT?

Breakout rooms allow all students to collaborate and share their thoughts. It is also a great way to build community in our virtual classrooms. Students enjoy having time to share weekend plans, road trips, and birthday celebrations to mention a few. Breakout rooms give students the opportunity to be able create a more in depth relationship with their classmates through a screen.
