

WHAT IS IT?

Students utilized their knowledge of chemistry while creating the best quality salt dough which was to be used to create their topographic map of the country they created in Social Studies.

IMPACT?

Being a culminating activity; I believe that the overall student experience throughout the process as well as allowing the teacher to observe and witness what students were able to take from the unit are extremely impactful. STEM is the ability to incorporate what the Ss are learning cross-curricular; I believe that is what was accomplished. It was not a separate engineering activity which coming from a STEM focused school is something I believe that is often overlooked when planning STEM projects for Ss.
